## RESEARCH INTERESTS

My research focuses on advancing AI technologies and online platforms to better serve people who are overlooked in the development of these systems. Driven by my interdisciplinary background, I develop technical frameworks and methods grounded in social science to (1) audit AI technologies and platforms for bias, factuality, and information quality, and (2) understand social phenomena, such as community norms, through language and online behavior, to promote socially-attuned and equitable technologies.

**Topics :** *Social Computing, Computational Social Science, Algorithmic Audits, and NLP.*
